

The Hardigg ProRack™ Case

Protection for the Real World

At Hardigg, we understand that a case has to do more than look good. It has to take whatever the world dishes out without putting your gear at risk. After all, your equipment is more than a set of tools: it's a fundamental part of the way you do business. Hardigg Cases has spent the last thirty years designing cases to survive the harshest environments on Earth, from the Sahara to the Antarctic. Our cases can take repeated drops, blows, and soakings while our one-piece plastic shell helps cushion your gear from the ride. So before you buy a case that looks good and performs badly, check out a Hardigg ProRack™ and stop worrying about the real world. We've been there.

Hardigg ProRacks™ are compact 19" EIA rack cases offering outstanding durability and protection for your gear with a minimum of wasted space. These rugged 18" deep cases feature a unique conic-fit aircraft-aluminum frame (Pat. Pending) which is suspended on plastic fins to protect your gear from direct impact transmission. All hardware is recessed to protect it from damage, and the durable molded-in color can't be scratched away. Two rugged twist catches allow quick removal of lids, even when cases are stacked, and thick gasketing seals the case against rain and dust. See reverse for a full description of features and options.

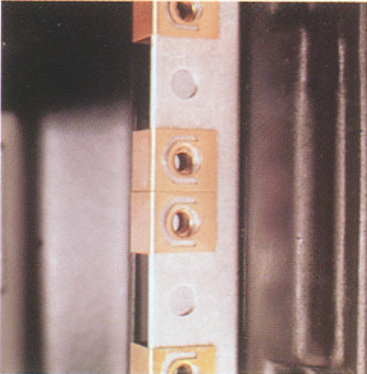

The Hardigg ProRack™ Case
